

AUCA00073 Cabot's Timbercolour Deck & Exterior Paint

Introduction

Part A
540-line

Description and Image

Cabot's Timbercolour Deck & Exterior Paint is a premium acrylic self priming exterior paint specifically formulated to provide exceptional durability to all exterior timber surfaces and decking. Its unique formula nourishes and protects the timber while providing excellent dirt and stain resistance.

Features and Benefits

- Self priming
- Mould and fungi resistant
- Suitable for walk on surfaces
- UV protection
- Easy to apply
- Low sheen solid colour finish

Uses

Exterior projects including weatherboard, garden furniture, decks, pergolas, fences and window frames. Also suitable for brick and masonry.

Precautions and Limitations

Temperature must be above 10°C during application and drying time. Do not apply if rain is expected during the drying period. In summer, hot windy conditions may necessitate painting on the cooler, shaded part of the project.

Performance Guide

Weather Excellent.	Heat Resistance Up to 70 degrees Celsius. Higher temperatures will cause film to soften.
Water Excellent.	Abrasion Good.

Typical Properties			
Gloss Level 5-20% measured at 60 degrees		Heat Thinner Water	
Colour Timbercolour Deck & Exterior Paint can be tinted to a large range of colours.			
Number of Coats 2-3			
V.O.C. Level < 50g/L			
Meets GBCA V.O.C. Requirements? Yes Total Volatile Organic Content (TVOC) values are calculated in accordance to the stated methodology within Green Star Technical Manuals. The TVOC content is theoretically calculated as the sum total of the known VOC values of the product's raw material components. These materials include the base paint plus additional low VOC tinter required for non-factory packaged colours.			
Touch Dry 30 minutes			
Clean Up  Water			
Application Methods  Brush  Roller  Spray			
Application Conditions		Solids by Volume	
		<input type="text" value="36"/>	
	Min	Max	Recommended
Wet Film Per Coat (microns)	<input type="text"/>	<input type="text"/>	<input type="text" value="64"/>
Dry Film Per Coat (microns)	<input type="text"/>	<input type="text"/>	<input type="text" value="23"/>
Recoat Time (min/hours)	<input type="text" value="2 hours"/>	<input type="text"/>	<input type="text"/>
Theoretical Spread Rate (m²/L)	<input type="text"/>	<input type="text"/>	<input type="text" value="16"/>
Typical Property Notes Coverage Approximately 16m²/L, depending on the porosity of the timber. Note: The first coat on porous and rough sawn timbers will require more coating than subsequent coats. Dry times All timings quoted at 25°C and 50% relative humidity. Cold or humid conditions may require longer. Touch dry: 30 minutes. Recoat: 2 hours minimum. May be subjected to light foot traffic 24 hours after final coat. Normal foot traffic after 72 hours. Wait for 7 days before replacing furniture and rugs. Full cure in 7 days.			

Application Guide

Surface Preparation

New, pre-oiled timber

Timber that is factory pre-oiled with Intergrain Universal Timber Oil or Feast Watson Industrial Timber Oil does not require exterior weathering or treatment to remove tannin or oils. This pre-oiled timber can be directly over coated with any Cabot's oil or water based topcoat product.

All timber should be clean and free from dust, dirt, debris, and mortar prior to coating.

Light surface soiling: A light wipe down with a clean damp cloth will be suitable.

surface soiling: Clean the surface with Cabot's Deck Clean following label the directions on the pack and rinse.

Allow the surface to dry thoroughly prior to topcoat application.

Heavy

IMPORTANT

Prior to topcoat purchase and application, it is important to identify the type of oil the supplier or timber merchant has used, to ensure it is compatible with water-based oil application. If unsure, follow the recommendations below for New Raw Timber.

New raw timber

To coat new bare timber immediately, scrub damp timber with Cabot's New Timber Prep, following label instructions. New Timber Prep will draw out tannins and oils quickly from the surface, allowing you to skip the 4-6 weeks weathering process required for new timber. Always follow New Timber Prep with Cabot's Deck Clean following label instructions. Remove excess water from the surface with squeegee on Cabot's Deck Prep brush and allow timber to dry for at least 1 hour. Note: Cooler conditions could slow down the drying time of the timber.

Weathered timber

Fill any cracks or holes with a suitable filler. Sand all surfaces to a flat finish and remove greyed timber. Dust off and wash with Cabot's Deck Clean.

Pre-primed timber & painted surfaces

Test if surface is sound¹. If not, scrape off all loose and flaking paint. Fill any cracks or holes with a suitable filler. Sand all surfaces to a flat finish and remove greyed timber. Dust off.

Brick, masonry, fibro & fibre cement board

Unpainted masonry surfaces should be cured for 28 days before painting.

Ensure surface is sound¹ and clear of any loose sand or cement. Fill holes with grouting cement. Wash down with water using a stiff brush to remove all loose material. To remove any efflorescence (white salts) wipe down with a 5% solution of acetic acid (white vinegar). Hose down & allow to dry.

Wash with a bleach solution and/or de-mossing chemical to remove mould, or moss. Then hose down. For further information on any preparation call 1800 011 006.

¹Ensure surface is sound by cutting a small X through the existing paint with a sharp blade, press cellulose tape firmly across the cut and then rip off the tape. If the paint comes off, it is unsound and should be removed. Repeat at random in a number of areas, to test the surface.

Application Procedure and Equipment

Stir thoroughly with a broad flat paddle before and during use.

Apply by brush, roller or spray. When spraying, always back brush immediately after each section is coated, to ensure a uniform finish.

Apply two generous coats of Cabot's Timbercolour Deck & Exterior Paint.

Apply three coats on all unpainted timber.

Some colours may require more than the recommended number of coats to achieve full opacity.

Take particular care to seal the end grain.

Thinning: In hot conditions or highly absorbent surfaces, thin the coat with up to 10% water.

+Regular maintenance

Durability on horizontal surfaces will depend on wear and weather. Colour fading may occur in areas exposed to heavy foot traffic or excessive weather. Reapply coating as colour changes or as water resistance diminishes. Follow surface preparation instructions. As a guide, it is recommended to conduct a routine maintenance inspection and recoat as soon as the coating shows signs of deterioration. Additional maintenance may be required for extreme conditions.
